Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1882 edition. Excerpt: . . . to treatment, we again fear that little more can be offered than the radical one of extraction; but, before we resort to this extremity, iodide of potassium, in somewhat large doses, should have a trial. It is always of service to place such teeth in a normal condition, by having them meet their antagonists properly; this may require modification of their shape by filing, or grinding with corundum wheels on the dental engine; sometimes capping the adjoining ones to relieve undue pressure, and at others, where no antagonizing tooth is present, inserting an artificial one. Counter-irritation, as a blister over the root, by painting the gum with the saturated tincture of iodine, is also serviceable. These remedies may be quite effective if applied early; but after the disease has progressed to the extremity described, benefit might be derived from cutting away the hypertrophied portion with a point in a burring engine. It is not a very uncommon occurrence to meet with the two conditions just spoken of existing together, and to find the fang of a tooth in one portion hyperostosed and in another more or less absorbed. CHAPTER XII. FITTING ARTIFICIAL CROWNS TO ROOTS OF NATURAL TEETH. IN all cases the roots should have been treated and filled a sufficient time to insure against danger from inflammation or abscess. Often, a root whose surrounding tissues have been tender, and threatening chronic inflammation, will be restored to a comfortable condition by regaining the normal...
