General Books LLC. Paperback. Book Condition: New. This item is printed on demand. Paperback. 32 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1860. Excerpt: . . . In conclusion, it may be remarked, that in the cases represented in figs. 1, 2, and 3, it is not necessary to illuminate so large an area as in that represented in fig. 4, because the area seen by the observer is smaller in the former ones. Part III. --MODES OP VIEWING OBJECTS WITHIN THE EYE. Having now considered the mode of illuminating the fundus oculi, we come to treat of the various conditions under which we may obtain a distinct view of objects situated upon it, by means of light reflected from their surfaces. If we hold a biconvex lens between the eye and the page of a book, and at a distance from the book less than its own principal focal distance, we see an erect magnified virtual image of the print. If we remove the lens further from the book, the print appears more and more magnified; and when the distance between them has become equal to the principal focal distance of the lens, or nearly so, the letters begin to appear indistinct; while on withdrawing the lens a little further, the print becomes illegible. The reason of this is, that the rays which emanate from a given point on the page, are first rendered parallel to one another, and at length convergent, by their refraction at the surfaces of the lens. The majority of normal eyes can only be adjusted, so as to bring rays which are more or less...
