Moreover, it is easy to show that the matrices of any vacuous algebra form themselves into sub-groups, all the matrices of a sub-group having a null point in common, and constituting an algebra by themselves: for want of a better name we may call the algebra formed by the matrices of a sub-group a connected algebra. Lastly, unless all the matrices of connected w-triple --ary algebra satisfy equations of the form xr=0, r n, we can always (as is not hard to see by counting constants and equations) get matrices such that their wth power vanishes and no lower power vanishes: in this case we can call the connected algebra a general connected algebra. In this note I consider general connected ternary triple algebras. Let a; be a ternary matrix such that a;8 = 0, and y...
